

MAY YI KO

FULL STACK DEVELOPER

Address: No.(1/B),Yangon-Insein Road,16 Quarter,Hlaing Township. | Phone: +959 756916318 | Email: mayyiko202@gmail.com

About

Full-Stack developer with foundational web development training and hands-on project experience building web applications using PHP, Laravel, React/Next.js, and MySQL. Seeking a Junior Web Developer opportunity to contribute to real-world projects and continue developing technical skills.

Selected Experience

Junior Full-Stack developer Intern **2026 April - August**

Ace Plus Solutions (MICT Park)

- Completed a comprehensive 6-month professional training program (3 months of intensive theoretical learning followed by 3 months of hands-on On-the-Job Training).
- Developed and practiced full-stack web development skills using PHP, Laravel, React, and MySQL.
- Collaborated with peers on practical projects, managed version control via Git/GitHub, and applied best practices in building responsive web applications.

Certificates

- Professional Web Developer Course
  Fairway Technology
- Basic Java Programming
  Fairway Technology
- Basic C# Programming
  ACE Inspiration

Education

B.Sc. Physics — Final Year Completed

[West Yangon University]

Technical Skills

Languages

- PHP
- JavaScript
- TypeScript

Database

- MySql
- PostgreSQL
- MongoDB

Backend Development

- Laravel
- Nestjs
- Nodejs

Frontend Development

- React
- Vuejs
- Nextjs

Other Technologies

- Git and Github
- Digital Ocean
- AWS
- Docker

Selected Projects

Meeting Room Booking System

Engineered a robust full-stack web application designed to streamline workspace allocation by allowing users to check real-time availability, select specific dates and time windows, and instantly reserve meeting rooms. Built with a scalable backend architecture utilizing Laravel and MySQL, the system enforces strict scheduling validation rules to eliminate booking overlaps and manage room capacities. On the client side, React and Tailwind CSS deliver an intuitive, responsive interface with interactive scheduling workflows. To expand market reach, I designed a feature roadmap to transform the system into a multi-tenant B2B meeting room rental platform, providing external small companies and remote teams with flexible, on-demand room reservation and billing capabilities.

Student Management System

Architected and developed a full-stack web application designed to centralize and automate administrative workflows for educational environments. Built on Laravel and MySQL, the system features a relational database model that manages complex entity mappings between students, instructors, and class batches, ensuring data integrity and seamless cohort tracking. The backend delivers robust RESTful APIs with strict request validation and role-aware data filtering, while a responsive React frontend provides administrators with interactive dashboards to manage enrollments, monitor course assignments, and maintain detailed student records efficiently.

Ticket Management System

Contributed to the development of a production-grade internal project management tool designed to capture and execute actionable outcomes from weekly team planning meetings. Engineered responsive dashboard interfaces and comprehensive project overview pages using React and Tailwind CSS, providing team members with a clean visualization of assigned tickets, deadlines, and task statuses. Built backend routing and database querying via Laravel and MySQL to handle real-time ticket updates, status transitions, and team assignment workflows, significantly improving task visibility and post-meeting productivity.
